THE RED MOUNTAIN VIEW GOLD MINING COMPANY.

Operating the VIEW MINE under a Crown Grant
from the Canadian Government, No. 645,
dated 13th August, 1896.

This Company was incorporated in 1896, under the
laws of British Columbia.

CAPITAL STOCK, - - - 1,000,000 Shares
Of the Par Value of \$1.00 each.

Issued as Fully Paid and Non-Assessable.

300,000 Shares are set aside to provide for the
development of the property.

OFFICERS OF THE COMPANY :

W. G. JOHNSON,	- - -	President.
I. N. CAMPBELL,	- - -	Vice-President.
D. M. LINNARD,	- - -	Secretary and Treasurer
W. H. HASKINS,	- - -	Mine Manager.

TRUSTEES :

JUDGE WILLIAM W. SPINKS,
I. N. CAMPBELL, W. G. JOHNSON.

THE property is situated on the north-western slope of Red Mountain, about 3,000 feet northerly from the "War Eagle" mine. It is bounded on the north by the "Peak" and "Snow-Shoe" mining claims, and on the east by the "Southern Belle;" on the south by the "Consolidated St. Elmo" and "St. Elmo," and on the west by the "Peak" mining claim.

The "View" mining claim is 945 feet long on the strike of the vein. It has two strongly marked veins upon the surface. The strike of the many parallel veins of this district are practically east and west. The adjoining claims to the "View" all show well.

The development work on the "View" property consists of one tunnel nearly 100 feet in length run on the south vein, which shows ore all the way with average width of three feet, assaying well in gold, silver and copper. At present

two shifts of men are working at this point. A shaft ten feet deep has been sunk on the north vein, which also shows ore. This vein is very strong upon the surface, in many places being 20 feet in width.

The surface showings on the claim are considered equal to those on any other part of Red Mountain, and exhibit in a marked degree the best characteristics of the camp.

The assays have been from \$8.00 to \$41.00 per ton. The transportation facilities from Rossland will shortly be ample, as the Red Mountain Railway is expected to be running by October, when it will connect with the whole railroad system of the United States.

The special advantages of the "View" have been referred to in the prospectuses of several mines recently offered in the Rossland district, and the consensus of opinion among mining men is that this property will be one of the leading mines in the camp, and every report we receive fully corroborates this view.

We have only a limited number of shares

of "Red Mountain View" for sale and we confidently recommend it to our clients as one of the most favorable claims we have investigated.

Copy of article in the *Mining Journal Railway and Commercial Gazette*, of London, Eng., Aug. 8th, 1896:

"MINING NOTES FROM BRITISH COLUMBIA."

"The handsomest Copper Ore ever seen in the Trail Camp is in the 'View.' The 'View' deserves to take place beside the City of Spokane and Monte Cristo in the way of fine showing ore. The tunnel is now in about thirty feet, and the last shots put in revealed three feet of clean, solid copper as handsome as ever seen. It is a chalcoppyrite running from 15 to 20 per cent. copper, and carrying from \$5 to \$6 in gold. It is of a shipping quality, and the 'View' will now be reckoned among the first of the junior mines of the camp."

ROSSLAND MINER,

September 4th, 1896.

"VIEW" HAS SHIPPING ORE—ST. ELMO HAS
OPENED THE VEIN ON ITS GROUND—AN
INTERESTING SITUATION.

One of the most attractive looking ore dumps now in the camp is that of the "View." The shaft which is being sunk on the ore shute, opened in the tunnel, is now down 12 or 14 feet. There are two good walls and about five feet of mixed ore between them. Fifteen inches of this ore is solid, clean chalcopÿrite. It runs fully 15 per cent. copper and is very much like the ore now being taken from the new shaft in the cliff. The "View" ore is of shipping quality and as it accumulates on the dump it gives an assurance that the "View" is going to be one of the successful mines of the camp.

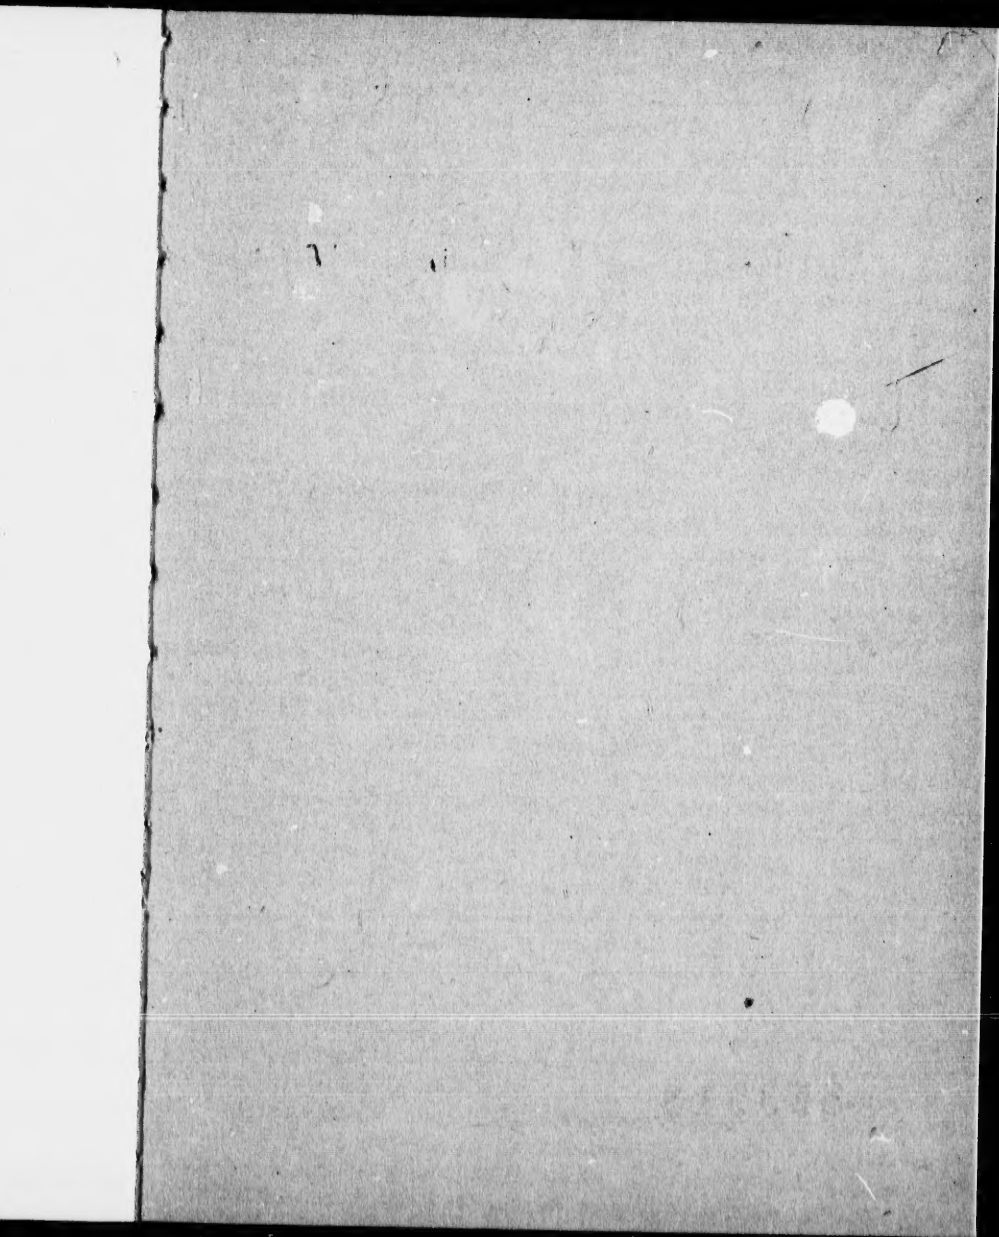

The Superintendent of the "St. Elmo" has been following up the "View" ledge and has traced it into the "St. Elmo" ground where he has opened it and discovered ore very similar to that found on the "View." The ledge is

strong and well marked and was traced without much trouble. The "St. Elmo" people will concentrate all their work on this ledge for the present and are very confident of opening up a fine body of ore.

The "Southern Belle" people are getting ready to commence development work, and the first thing they do will be to trace the "View" ledge into their ground and to drive a tunnel on it. It will be seen therefore that the "View" occupies a very important position not only with reference to itself but as a near neighbor to the "St. Elmo" and "Southern Belle."
